

## Puro.earth CO<sub>2</sub> Removal Standard and Registry

# Production Facility and Output Audit Statement

Statement No.	Date of Issue	Validity Period
001	29 July 2025	22 March 2024 to 28 February 2025

EnergyLink Services have verified the CO<sub>2</sub> removal achieved by the following organisation (the audited body) in accordance with the *Puro General Rules Version 4.1*.

Puro.earth Project Proponent & Facility Operator

*Bio-Logical Carbon LTD*

The result of the Production Facility and Output Audit is reported in the document titled Bio-Logical Facility and Output Audit Report and relates to the activities carried out at the Production Facility Name: Bio-Logical Mt Kenya Biochar Project, ID: 664457, located at: Kabati, Murang'a - Kenya.

### Production Facility Audit

Based on the verification process, EnergyLink Services observed that in general, the organisations had the appropriate processes and procedures in place to quantify the production of CO<sub>2</sub> removal via the method stated below and is compliant with the requirements of the *Puro General Rules*.

CO <sub>2</sub> Removal Type	Eligibility of the Production Facility
Biochar	Eligible

### Output Audit

EnergyLink Services have verified that the calculation of CO<sub>2</sub> removal achieved through the production of biochar for the period 22 March 2024 to 28 February 2025 has been prepared in accordance with the Puro.earth Biochar Methodology.

# Attachment to the Statement

Reporting Period	Type of Feedstock	Eligible CORC conversion factor	Eligible CORCs
22 March 2024 to 28 February 2025	Macadamia	2.231 tCO <sub>2</sub> e per dry tonne biochar	432.24
22 March 2024 to 28 February 2025	Prosopis	1.841 tCO <sub>2</sub> e per dry tonne biochar	278.99

## Verification Objective

EnergyLink Services was engaged to conduct an audit to validate that the audited body's calculation of CO<sub>2</sub> Removal from the production of biochar for the period 22 March 2024 to 28 February 2025 had been prepared in accordance with the Puro.earth Biochar CO<sub>2</sub> Removal Methodology and with reference to the eligibility requirements for a Production Facility.

## Verification Scope

- Production Facility Audit under the Biochar CO<sub>2</sub> Removal Methodology.
- Output Audit for the period 22 March 2024 to 28 February 2025 under the Biochar CO<sub>2</sub> Removal Methodology.

## Verification Level of Assurance

The verification was conducted by EnergyLink Services with a reasonable level of assurance. A reasonable assurance engagement in accordance with ISAE 3000 involves performing procedures to obtain evidence about the Production Facility process controls and the quantification of CO<sub>2</sub> Removal in accordance with *Puro General Rules*.

There are inherent limitations in performing assurance — for example, assurance engagements are based on selective testing of the information being examined—and because of this, it is possible that fraud, error, or non-compliance may occur and not be detected. An assurance engagement is not designed to detect all misstatements, as an assurance engagement is not performed continuously throughout the period that is the subject of the engagement and the procedures are performed on a test basis.

The conclusion expressed in this statement has been formed on the above basis.

## Verification Criteria

The requirements applicable to the organisation are the *Puro General Rules Version 4.1*.
