United States

Description

Wakefield BioChar aims to make the planet healthier through their “Better Soil. Better World.” philosophy. Based in Valdosta, Georgia, a city with a long history in the forestry industry, the company focuses on managing pulp and paper and sawmill waste and creating sustainable products. They have a range of branded biochar products and compost blends sold through retailers such as Lowes, Amazon, and Sam's Club. They also supply local farmers with biochar to improve grass yields and use biochar blends for land remediation projects. The feedstock is pine bark and sawdust from FSC and SPIB-certified forests. The company is expanding and opening new pyrolysis facilities in 2024, financed partially through carbon credit sales.

Co-benefits

Improve crop and dairy yields.

Increased drought resilience in an area that has a history of drought.

Adsorption of pollutants in land remediation projects.

Biochar reduces the need for fossil fuel-based fertilizers.

Creation of green jobs in a region designated by the IRS as a low-income/disadvantage area.

Sustainable development goals
